

Perfect harmony

The timeless arrangement of large-scale panels of fabric combines decorative sun protection with an extraordinary functionalism. sundrape® offers a large diversity of possibilities. Whether freely movable or cord control, rod control or an electric version – the large number of fabrics for use in private areas or in business areas and computer work places is included in our comprehensive sundrape® collection. The comfortable and convenient system can be used as a room divider or in front of windows, in a straight version or including a corner solution and it is always an elegant means of room design made to your measures.

Also available sundrape® products: vertical blinds, classic roller blinds, sundrape® Quadro roller blinds, electric curtain track systems as well as large-scale and special shading systems

SUNDRAPE® PANEL CURTAIN SYSTEM

- Mounting:** ceiling mounting with mounting clips or quick locking bolts, wall mounting with adjustable mounting angles with a shapely cover cap for 2-5 channel guide rails

Flexibility in planning and use

Different possibilities and arrangements of the panel stack positions, running directions and a corner solution for freely movable panels offer various possibilities to realize your ideas.

Perfect functionality in every detail

The high grade and well-engineered technique of our sundrapé® panel curtain system is the guarantor for an extraordinary functionality and longevity.

The guide rails and panel curtain track runners are coated with a high grade matt white or silver powder coating. After rail mounting the panel track runners can simply be inserted into the multi-tracked rail where they glide silently and smooth-running.

Plastic end caps for the panel track runners are covering the cut edge and care for an optically pleasant rail profile end.

An extra heavy bottom bar cares for an optimal hanging of the panel fabrics.

The number and the arrangement of the 2-5 panel guide rails can individually be determined and combined. So even very large panel curtain systems can be realized.

Rail lengths of 7 metres are possible and can even be enlarged up to your desired size by means of a rail connector.
