your sundrape® dealer:

Roller blind system

Innovative technique

Sundrapé® Quadro^s is not only beautifully designed, it works excellently, too, due to a number of technical innovations. For example, the new, internationally patented drapery security device SunTape.

Perfect in detail, multiple in utilization

Many different operation elements that have been worked out in detail and are perfectly coordinated, as well as a number of drapery guidings always guarantee a perfect solution at any possible site.

mounting on casement with SunTape lateral guiding

mounting on casement with cord drive and SunTape lateral guiding from bottom to top

mounting on casement with SunTape lateral guiding and cord drive

mounting on casement with tension wire guiding

mounting between window rabbet with rabbet guiding

mounting between window rabbet with rabbet cover

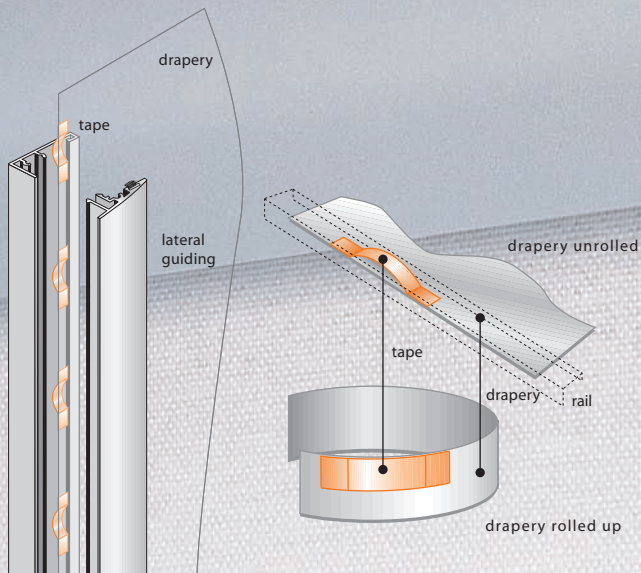

mounting between window rabbet, rabbet guiding and cord drive

mounting between window rabbet, rabbet cover and cord drive

The unique principle of SunTape

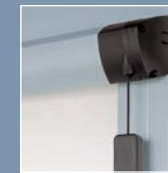

The Tapes are lying flat on the drapery when the roller blind is rolled up and so they do not cause any material thickening. Due to this new way of drapery security the insertion of the drapery into the lateral guiding is extremely small and at the same time the drapery cannot slip out.

Aesthetics meet functionality

sundrapé® Quadro^s is a product that has been designed especially for the application directly on the window casement or between the window rabbet.
